|------------------------|-------------------|--------------------------|----------------------|
| Steelmaking            | B.O.S. / Con Cast | Grades                   |                      |
|                        |                   | As below                 |                      |
| Semi-Finished Products | Slabs             | Grades                   | mm thickness Maximum |
| -                      | Killed            | carbon, carbon-manganese | 350.0                |

Approved slab section sizes up to 350 x 2600mm.

Steel types carbon and carbon-manganese cover the supply of slabs for processing into normal strength, high strength, boiler and pressure vessel grades and ferritic steels for low temperature service according to the Society's Rules for the Manufacture, Testing and Certification of Materials, Chapter 3. The final processing mill is responsible for ordering steel which complies with their approved chemical composition and enables them to achieve the required mechanical properties.

Valid Until : 13 February 2021  
Date of Issue : 16 July 2018
